

# Assignment # 1 – Simple Calculator

Create a new Android application which has output similar to the one in the screenshot below:

You'll need to create a reusable class that allows the user to specify two numbers. The output of the class will add, subtract, multiple, and divide those two numbers. You should be able to create several instances of the class, specify different numbers for each instance, and return correct results for each.

Output format:

FirstNumber + SecondNumber = Answer

FirstNumber - SecondNumber = Answer

FirstNumber \* SecondNumber = Answer

FirstNumber / SecondNumber = Answer
